SALES TOOLS INC. Sales presentation binders

AN ALL
INCLUSIVE SHOW

TO VISIT OUR

1954 BUSINESS EXHIBIT

THIS YEAR WE ARE PRESENTING

ANOTHER OUTSTANDING BUSINESS EXHIBIT

a full panorama of the equipment and materials being created today for government offices and institutions. You will see a complete line of all the standard items plus many interesting new developments . . . ingenious equipment . . . simplified methods . . . fascinating new work materials.

Some of the 1954 items are so utterly different from anything that has come before that even their manufacturers do not yet appreciate their many uses. We learn of new uses from our customers who suggest ways in which these items can be adapted to fill special needs. You are sure to gain many helpful ideas by visiting our '54 exhibit. It's a show to keep you abreast with developments in the business field.

SOME INTERESTING HIGHLIGHTS OF THE EXHIBIT WILL BE

Magnetic Record-Keeping Systems—Magnetia repulsion helps to separate file cards, clearing a path to the card as you reach for it. Eliminates fumbling and "thumbing". The nearest approach to "automatic" filing.

Oil-Stik Labeling—A revolutionary, new product with many uses. Sticks tightly on oily surfaces to which other sticky tapes will not adhere. The answer to a long-felt need. . . . **Lateral Suspension Filing**—A superior concept in filing. Records kept in open-frame suspension files with side-view identification are easy to locate, easy to remove and to replace.

Offers greater protection for records and materials, too. . . . **Presentation Devices for Reading Exhibits, Graphs, etc.**—Includes a wide variety of new-idea easel-type and fold-out devices. Designed for advantageous display, effective dramatization of materials and for specific presentation situations. . . . **Mounted Waste Receptacles**—New easy-to-mount receptacles are ideal for foyers and halls. Encourage neatness . . . no careless tossing of waste materials. Facilitate cleaning . . . waste is removed beneath receptacle. Durable steel construction makes these receptacles suitable for outdoor as well as indoor locations. . . . **Plastic-Treated Paper Container Service**—Plastic creates these better containers—stronger, more heat-resistant, acid-proof and sanitary. Liquids carry no "carton taste". Many-purpose plastic containers are proving useful everywhere—in hospitals, institutions and in businesses of all types. . . . **Vertical Plan-Files**—At long-last, a practical solution to the problem of filing engineering drawings! In planfiles, drawing folders are held smoothy and firmly in vertical position. Drawings receive proper protection. Filing and classification are a precise matter. More economical, even, than old-style flat-drawer filing systems. . . .

These are only a few of the new ideas in business equipment which will be demonstrated.
